## SECTION A: MONTHLY LABOUR FORCE SURVEY

#### The Labour Market in Brief: February 1995

Trend estimates

Employment

In February 1995, the provisional trend estimate of employment rose to 8,121,500, 6.6 per cent higher than the January 1993 low point of 7,615,400. The trend estimate of unemployment fell slightly to 794,300 persons, the lowest level since March 1991. The trend estimate of the unemployment rate has been generally decreasing since early 1993 and in February 1995 stood at 8.9 per cent, the lowest level since February 1991. The trend estimate of the participation rate rose slightly to 63.4 per cent in February 1995, a rise of 1.1 percentage points since the May 1993 low of 62.3 per cent.

In February 1995, the seasonally adjusted estimate of employed persons rose by 75,200 to 8,158,200. Full-time employment rose by 91,100 to 6,164,700 in February 1995. Male full-time employment rose by 50,400 to 4,171,700 while female full-time employment rose by 40,700 to 1,993,000. The seasonally adjusted estimate of part-time employment fell by 15,800 to 1,993,600.

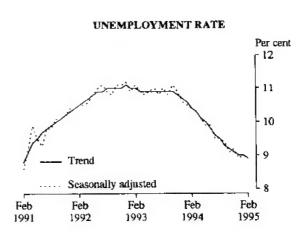

Unemployment

Unemployment rate

In February 1995, the seasonally adjusted estimate of unemployed persons remained relatively steady at 801,100. The number of unemployed persons seeking full-time work fell slightly to 636,600 while the estimate of persons seeking part-time work rose by 9,400 to 164,500.

The February 1995 seasonally adjusted unemployment rate fell slightly to 8.9 per cent. The unemployment rate for males fell by 0.2 percentage points to 9.0, while for females the unemployment rate rose by 0.2 percentage points to 8.9 per cent.

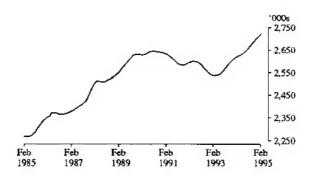

Participation Rate

The seasonally adjusted estimate of the labour force participation rate increased by 0.5 percentage points, but due to rounding stood at 63.7 per cent in February 1995. For males, the participation rate rose by 0.4 percentage points to 74.3 per cent, while the female participation rate rose by 0.5 percentage points to 53.5 per cent, the highest rate recorded by the survey.

#### PERSONS EMPLOYED BY STATE: TREND SERIES

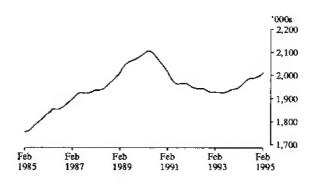

**New South Wales** 

Trend employment for New South Wales has been rising since March 1993 after falling between April 1992 and March 1993. In February 1995, the trend stood at 2,719,200, 7.2% higher than the March 1993 low of 2,536,400 and 2.9% higher than the previous peak of 2,643,100 in August 1990.

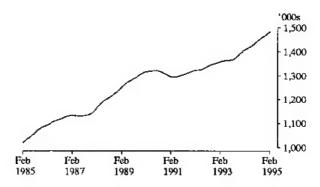

Victoria

After falling markedly from the peak of 2,105,300 in May 1990, the trend estimate of employment for Victoria declined more slowly to a low point of 1,925,300 in June 1993. Since then, the trend has been rising and in February 1995 stood at 2,009,900, 4.7% lower than the May 1990 peak.

Queensland

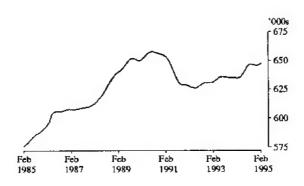

Apart from falls in early 1987 and between May 1990 and April 1991, trend employment in Queensland has been increasing over the last ten years. In February 1995, the trend stood at 1,481,900.

#### PERSONS EMPLOYED BY STATE: TREND SERIES

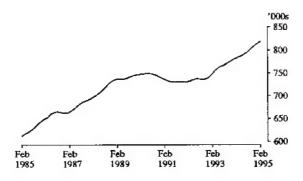

#### South Australia

Trend employment in South Australia fell markedly between July 1990 and late 1991, then declined more slowly to May 1992. Apart from brief periods of decline in 1993 and 1994, the trend has been generally rising and in February 1995 stood at 647,400, 1.6% lower than the July 1990 peak of 657,700.

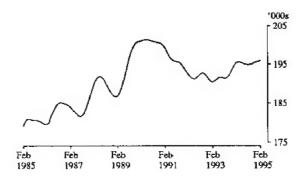

#### Western Australia

For Western Australia, trend estimates of employment have been generally increasing over the past ten years apart from slight falls in late 1986, during late 1990, and again in late 1991. After remaining relatively flat for most of 1992, the trend began to rise in November 1992 and in February 1995 stood at 818,100, 9.2% higher than the May and June 1990 peak of 749,300.

#### Tasmania

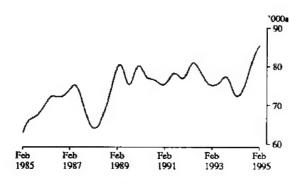

After falling to a low of 190,400 in February 1993, the trend in employment for Tasmania generally increased to reach 195,600 in March 1994. After falling during mid 1994, the trend is again rising and in February 1995 stood at 195,900, 2.7% lower than the April and May 1990 peak of 201,400.

### PERSONS EMPLOYED BY TERRITORY AND AUSTRALIA: TREND SERIES

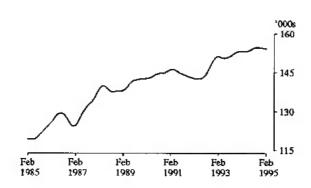

#### Northern Territory

Trend employment in the Northern Territory fell from 77,400 in September 1993 to a low of 72,300 in March 1994. Since then, the trend has been rising and in February 1995 stood at 85,300, 5.4% higher than the previous peak of 80,900 recorded in April and May 1992.

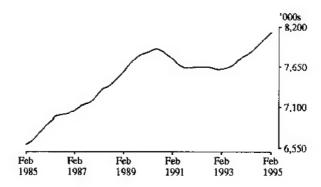

#### **Australian Capital Territory**

After falling to 142,500 in April 1992, trend employment in the Australian Capital Territory rose to a peak of 154,600 in September and October 1994. Subsequently, the trend has fallen slightly and in February 1995 stood at 154,100.

Australia

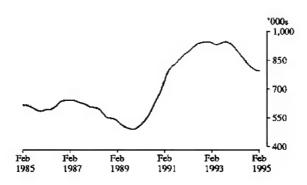

After reaching a peak of 7,894,700 in June 1990, trend estimates of employed persons fell by 3.5% to 7,615,400 in January 1993. Since then, the trend has been rising and in February 1995 stood at 8,121,500, 2.9% higher than the June 1990 peak.

#### PRINCIPAL LABOUR FORCE: TREND SERIES

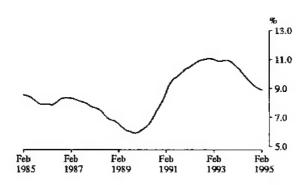

#### Unemployment

Trend estimates of unemployment fell to a low of 491,500 in October 1989 then rose to a peak of 946,400 in late 1992. The trend has been falling since then, apart from a short period of increase during mid 1993, and in February 1995 stood at 794,300.

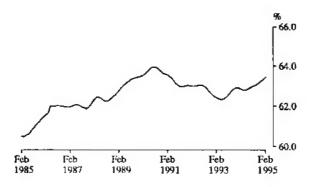

#### Unemployment rate

The trend unemployment rate fell to a low of 5.9% in late 1989, then increased rapidly to a peak of 11.1% in December 1992. The trend unemployment rate has been generally falling since then, and in February 1995 was 8.9%, the lowest level in four years.

#### Participation rate

After reaching a peak of 64.0% in July and August 1990, the trend participation rate fell to 62.3% in April and May 1993. Since then, the trend has been rising, apart from a decline between February and May 1994, and in February 1995 stood at 63.4%, 0.6 percentage points lower than the peak of July and August 1990.

<sup>(</sup>a) "Relationship in household" is a new classification. See Explanatory Notes 45 and 46 and the Glossary for definitions of the categories. (b) Civilians who were residents of private dwellings where family status was determined. See Explanatory Notes paragraphs 43 and 44. (c) Excludes persons aged 20-24 attending school. Also excludes sons or daughters aged 15-24 who are classified as husbands, wives or lone parents. (d) Aged 15 and over.

#### EXPLANATORY NOTES

Revisions to estimates

Introduction

The population survey

Scope

Coverage

Population benchmarks

Seasonally adjusted and trend estimates have been revised as a result of the annual seasonal reanalysis. See the Appendix for more information.

This publication contains estimates of the civilian labour force derived from the Labour Force Survey component of the monthly population survey. Estimates of the labour force characteristics of family members and of family composition are also included.

- 2. Estimates of the civilian labour force are available for over sixty regions across Australia and are shown in various publications produced by State offices of the ABS. These data are also available on microfiche or as a special data service. For details, contact any ABS office.
- 3. Preliminary survey results are published in advance of this more detailed publication in *The Labour Force*, Australia, Preliminary (6202.0).
- 4. Although emphasis in the population survey is placed on the regular collection of specific data on demographic and labour force characteristics of the population, supplementary and special surveys of particular aspects of the labour force or of other subjects are carried out from time to time. Statistics from these surveys are available on request. Summary statistics from these surveys are published in *The Labour Force*, *Australia* (6203.0), from time to time.
- 5. The population survey is based on a multi-stage area sample of private dwellings (currently about 29,000 houses, flats, etc.) and a list sample of non-private dwellings (hotels, motels, etc.), and covers about one-half of one per cent of the population of Australia. The information is obtained from the occupants of selected dwellings by specially trained interviewers. The interviews are generally conducted during the two weeks beginning on the Monday between the 6th and 12th of each month. The information obtained relates to the week before the interview (i.e. the reference week).
- 6. The Labour Force Survey includes all persons aged 15 and over except:
  - (a) members of the permanent defence forces;
  - (b) certain diplomatic personnel of overseas governments, customarity excluded from census and estimated populations;
  - (c) overseas residents in Australia; and
  - (d) members of non-Australian defence forces (and their dependants) stationed in Australia.

From July 1993 Jervis Bay Territory is also excluded from the scope of the survey. Before July 1993 it was included in estimates for the Australian Capital Territory.

- 7. In the Labour Force Survey, coverage rules are applied which aim to ensure that each person is associated with only one dwelling, and hence has only one chance of selection. The chance of a person being enumerated at two separate dwellings in the one survey is considered to be negligible. See paragraph 43 for information about the effect of the coverage rules on family statistics.
- 8. Persons who are away from their usual residence for six weeks or less at the time of interview are enumerated at their usual residence (relevant information may be obtained from other usual residents present at the time of the survey).
- 9. Labour Force Survey estimates of persons employed, unemployed and not in the labour force are calculated in such a way as to add up to the independently estimated distribution of the usually resident population aged 15 and

over by age and sex. This procedure compensates for under-enumeration in the survey, and leads to more reliable estimates. Persons who, at the time of interview, are overseas for more than six weeks but for less than twelve months are included in the independent population statistics (benchmarks) and are thus provided for in the calculation of the estimates. The benchmarks are the latest available estimates at the time the Labour Force Survey is conducted, but they usually differ from the official population estimates subsequently published in Australian Demographic Statistics (3101.0) because they are derived from incomplete information about population changes.

Revision of population benchmarks

- 10. Survey estimates are not revised for the usually small amendments of population benchmarks arising from new data on deaths and overseas and internal migration. Revisions are made, however, after each Census of Population and Housing, and when population estimation bases are reviewed. These revisions affect original, seasonally adjusted and trend estimates. The last such revision was made in February 1994 to take account of the results of the 1991 Census of Population and Housing, which affected all the monthly estimates from January 1989 to January 1994.
- 11. Population benchmarks used in the estimation of Labour Force Survey data are compiled according to place of usual residence. For an explanation of the conceptual basis of population estimates, see *Information Paper: Population Estimates: An Outline of The New Conceptual Basis of ABS Population Estimates* (3216.0). Prior to October 1982, labour force estimates were based on a combination of place of enumeration and place of usual residence.
- 12. National surveys were conducted in February, May, August and November each year from 1964 to February 1978. The survey has been conducted on a monthly basis since February 1978.
- 13. The questionnaire used in the survey for the collection of labour force data has been revised from time to time, the latest occasion being for the April 1986 survey. Details of these changes have been published in *Information Paper:* Questionnaires Used in the Labour Force Survey (6232.0) in March 1978, December 1981, August 1984, June 1986, June 1991 and March 1993.
- 14. In April 1986, the questionnaire was revised following the extension of the definition of employed persons to include persons who worked without pay between 1 and 14 hours per week in a family business or on a farm (i.e. contributing family workers). This definition aligned the Australian labour force concepts with the set of definitions adopted by the 13th International Conference of Labour Statisticians in October 1982.
- 15. Previously, contributing family workers who worked 1 to 14 hours, or who had such a job but were not at work, were defined as either unemployed or not in the labour force, depending on whether they were actively looking for work. In order to assist users to assess the impact of the change, estimates for March 1986 based on the new definition were shown in footnotes to Tables 1 and 2 of the February, March and April 1987 issues of this publication.
- 16. A revised procedure for weighting families estimates, as presented in this publication, was also introduced in April 1986. Additional tables were included in the April 1986 issue of this publication to show the impact of this new procedure. Paragraph 48 contains more details.
- 17. As noted in paragraph 10, estimates from January 1989 were revised to conform to revised population estimates following the 1991 Census of Population and Housing, and are thus not strictly comparable with estimates for periods prior to January 1989. An examination of the revised estimates showed that the effects on Labour Force Survey estimates for the period before January 1989 were inconsequential, and that no meaningful purpose would be served by publishing revised estimates for that period.

History of the survey

Questionnaire changes

Inclusion of contributing family workers

Comparability of series

- 18. Comparability with estimates produced from the quarterly Survey of Employment and Earnings is affected by the use of a different survey methodology and definitions. The Labour Force Survey provides estimates of people in jobs whereas the Survey of Employment and Earnings provides an estimate of the number of jobs held by wage and salary earners. A more detailed description of the differences between these two series is provided in *Information Paper: Comparison of Employment Estimates from the Labour Force Survey and the Survey of Employment and Earnings* (6263.0).
- 19. From December 1989 onwards, the category "other families" was split into "one-parent families" and "other families". Therefore estimates of other families were not strictly comparable with estimates in previous issues. However, in November 1989, 97 per cent of other families with dependants were one-parent families. In March 1994, a new families classification was introduced which also affected comparability (see paragraphs 45 to 47).
- 20. Following each Population Census, the ABS redesigns and reselects the Labour Force Survey to take into account the new information which is obtained from the Census. The sample used in the Labour Force Survey from September 1987 to August 1992, which was designed and selected using preliminary data from the 1986 Census, was updated and reselected using information collected in the 1991 Census. The new sample was phased in over the period September 1992 to December 1992. For additional information, see *Information Paper:* Labour Force Survey Sample Design (6269.0), available from any ABS office.
- 21. The sampling fractions for each State/Territory differ and are such that the resultant sample yields reliable estimates of the main labour force aggregates for each State and Territory. The sampling fractions for the new sample together with the sampling fractions determined from the 1986 Census are:

		1991 Census			
	redesign redesign				
New South Wales	1 in 230	1 in 277			
Victoria	1 in 230	1 in 242			
Queensland	1 in 160	1 in 195			
South Australia	1 in 115	1 in 139			
Western Australia	1 in 115	1 in 146			
Tasmania	1 in 70	1 in 75			
Northern Territory	1 in 115	1 in 75

#### Reliability of the estimates

Survey sample redesign

- 22. Estimates in this publication are subject to two sources of error:
  - (a) sampling error: since the estimates are based on information obtained from occupants of a sample of dwellings they, and the movements derived from them, may differ from the figures that would have been produced if all dwellings had been included in the survey. More information on this topic is given in the Technical Notes; and
  - (b) non-sampling error: inaccuracies may occur because of imperfections in reporting by respondents and interviewers and errors made in coding and processing data. These inaccuracies may occur in any enumeration, whether it be a full count or a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

## Differences between Census and Labour Force Survey estimates

23. The results of the 1991 Census of Population and Housing show that labour force estimates derived from the census differ from those derived from the Labour Force Survey.

- 24. The broad concepts underlying the measures of the labour force and its components, employment and unemployment, are similar in the census and the survey. It should be noted, however, that census estimates of unemployment do not take into account the 'available for work' criterion.
- 25. There are considerable differences in both the collection methodology adopted (including the detailed questions asked) and estimation procedures. Factors contributing to differences in estimates include under-enumeration in the population census for which census labour force estimates have not been adjusted, the use in the Labour Force Survey of population benchmarks derived from incomplete information about population change (see paragraph 9), the inclusion of permanent defence forces in census estimates, the personal interview approach adopted in the survey as opposed to self-enumeration of census schedules, differing questions used to determine labour force characteristics (particularly the identification of unemployed persons) and differing methods of adjustment for non-response to the survey or census.
- 26. The Labour Force Survey provides detailed and up-to-date estimates of employment and unemployment for Australia, States and regions, whereas the Census of Population and Housing provides counts for small areas but in less detail than is available from the survey.
- 27. These considerations should be borne in mind when comparisons are made between population census and Labour Force Survey estimates.
- 28. Seasonally adjusted series are published in Tables 2, 8 and 40. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be recognised more clearly. Seasonal adjustment does not remove the irregular or non-seasonal influences which may be present in any particular month. This means that month-to-month movements of the seasonally adjusted estimates may not be reliable indicators of trend behaviour. For example, irregular factors unrelated to the trend account for more than half the seasonally adjusted movement with the following frequency:

Employment: 5 in 10 monthly movements
Unemployment: 7 in 10 monthly movements
Unemployment rate: 7 in 10 monthly movements
Participation rate: 9 in 10 monthly movements

- 29. The seasonal factors for all seasonally adjusted series are reviewed annually to take account of each additional year's original data. The latest review, in February 1995, revised the Australian and State seasonally adjusted and trend monthly series back to February 1978. Information about the method of adjustment and revised seasonally adjusted and trend estimates for all months since January 1990 for Australia and the States are published in the Appendix in this publication.
- 30. Smoothing seasonally adjusted series produces a measure of trend by reducing the impact of the irregular component of the series. The monthly trend estimates are derived by applying a 13-term Henderson-weighted moving average to all months except the last six. The last six monthly trend estimates are obtained by applying surrogates of the Henderson average to the seasonally adjusted series. Quarterly trend estimates (eg employment by industry) are derived by applying a 7-term Henderson moving average to the seasonally adjusted series. The 7-term Henderson average also uses surrogate forms of the average as the end of a time series is approached. Unlike the surrogate weights of the 13-term Henderson used on monthly data, the weights employed here are tailored to suit the particular characteristics of individual series. These trend series are used to analyse the underlying behaviour of the series over time.

Seasonal adjustment

Trend estimation

- Tables 3, 9 and 41 show trend estimates for the past 15 months. Trend series graphs are shown on pages 2 to 5. Data from February 1978 are available on the ABS on-line data dissemination service, PC-AUSSTATS. The trend series of the participation rate for married females are based on smoothed population estimates.
- 31. While this smoothing technique enables estimates to be produced which include the latest month, it does result in revisions to the most recent months as additional observations become available. Generally, subsequent revisions become smaller, and after three months or two quarters have a negligible impact on the series. There will also be revisions as a result of the annual review of seasonal factors mentioned above in paragraph 29.
- 32. Trend estimates for the Australian Capital Territory and the Northern Territory are published in Table 9. Original estimates for the two Territories have shown, historically, a high degree of variability, which can lead to considerable revisions to the seasonally adjusted estimates after each annual seasonal factor re-analysis. Seasonally adjusted estimates are not currently published for the two Territories. The most recent six months trend estimates are subject to revision. For the three most recent months, the revision may be relatively large. Inferences about trends drawn from smoothed seasonally adjusted (trend) estimates for months earlier than the latest three months are unlikely to be affected by month-to-month revisions. They may, however, be revised as a result of the annual re-analysis of seasonal factors.
- 33. Users may wish to refer to the ABS publication A Guide to Interpreting Time Series Monitoring "Trends", an Overview (1348.0) for further information about trend estimates. Details of the trend weighting patterns are available on request from the Assistant Director, Time Series Analysis on (06) 252 6345.
- 34. Care should be taken in the interpretation of month-to-month movements in these estimates. Survey estimates are subject to sampling and non-sampling variability as explained in paragraph 22.
- 35. In order to minimise respondent load and at the same time maintain continuity within the population survey sample, one-eighth of the dwellings are replaced after each survey. Adoption of this rotation procedure, whereby about seven-eighths of the sample remains unchanged from one month to the next, enables more reliable measurements of changes in the labour force characteristics of the population to be made than would be possible if a new sample were introduced each month.
- 36. Because a high proportion of private dwellings selected in one survey remains in the sample for the following survey, it is possible to match the characteristics of most of the persons in those dwellings from one month to the next, to record any changes that occur, and hence to produce estimates of flows between the different categories of the population and labour force.
- 37. The procedures used to select persons in non-private dwellings preclude the possibility of matching any of them who may be included in successive surveys. For this and other reasons, including the mobility of the population and non-response in either or both surveys, about 10 per cent of persons in those dwellings which are included in the sample in successive months cannot be matched. Those who can be matched represent about 80 per cent of all persons in the survey.
- 38. Changes in the characteristics of this latter group are shown in the gross flows table (Table 34). About one half of the remaining (unmatched) 20 per cent of persons in the survey are likely to have characteristics similar to those in the matched group, but the characteristics of the other half are likely to be somewhat different.

Month-to-month movements

Gross flows

- 39. Gross flow estimates relate only to those persons in private dwellings for whom information was obtained in successive surveys. The expansion factors used in calculating the estimates were those applying to the second of each pair of months. Note that the estimates have not been adjusted to account for the unmatched sample component.
- 40. Although it is not possible to provide gross flow estimates for all persons in the survey it is considered that the estimates derived from matched records will be a useful guide to the proportions of the movements between categories which underlie the changes in monthly levels. When comparing flows for different periods it is important to take into account the population represented by the matched sample, as shown in the last line of the table.
- 41. While every effort is made to reduce non-sampling errors to a minimum any such errors affecting labour force status will tend to accumulate in the gross flow statistics rather than to cancel out. The estimates are also subject to sampling variability, as explained in the Technical Notes. For these reasons the estimates of flows should be used with caution. The standard errors may be obtained from Table A of the Technical Notes.

Labour force status and other characteristics of families

- 42. As a part of survey procedures, family relationships are determined each month, enabling both the estimation of persons cross-classified by their relationship in the household and the estimation of families. This publication contains tables showing the labour force status and family status of individuals and families classified by family type, number of family members, the labour force status of persons within families, the number of children under 15 present and the number of dependants present.
- 43. Because of the coverage rules, persons who usually live with other members of their family may, at the time of the survey, be enumerated as not living with all the usual members of their family. This situation is more likely for persons who are enumerated as visitors to other private dwellings or as persons staying in non-private dwellings (hotels, hospitals, etc.). The determination of family structure and family characteristics in such cases is difficult. Thus for survey questions used to determine family relationships, scope was further restricted to usual residents of private dwellings and the following persons were excluded:
  - (a) all persons enumerated in non-private dwellings (including hotels, motels, hospitals and other institutions); and
  - (b) persons enumerated as visitors to (rather than usual residents of) private dwellings.
- 44. In addition, in those households where it was not possible to obtain information relating to all the usual residents, no family information was recorded. Thus persons living in households which include a member of the permanent defence forces, who is outside the scope of the population survey, are excluded from survey questions used to determine family relationships because family information could not be obtained from each usual resident. Similarly households which, at the time of the survey, have one or more of their usual residents away for more than six weeks, are excluded from the family survey. This also applies to households from which an incomplete or inadequate questionnaire was obtained for any usual resident in on scope and coverage. A summary of those persons for whom family information is obtained as well as those usual residents of private dwellings for whom complete family information cannot be obtained, and those persons specifically excluded from the family determination procedures is contained in the family tables. Generally, relationship in household is determined for more than 90 per cent of all civilians aged 15 and over.
- 45. Relationship in household and Family type classifications were introduced in the March 1994 issue of this publication to align with ABS standards. Most

Changes in families classifications

categories in the two classifications remain comparable with categories in the previous classifications. The cases in which there are breaks in comparability are discussed in the following paragraphs.

- 46. Relationship in household. This classification was previously referred to as Family status.
  - (a) Lone parents (previously referred to as Sole parents) now includes parents with non-dependent children (provided those children are without a spouse or children of their own). These Lone parents without dependants are shown separately in Table 35 and there were 205,800 such persons in March 1994.
  - (b) Dependent students (previously Full-time students aged 15-24) now comprise sons or daughters (of a couple or a lone parent) aged 15 to 19 attending school or aged 15 to 24 attending a tertiary educational institution full time. Other related full-time students, who were also previously classified as Full-time students aged 15-24 are now included in Other family persons. There were 24,200 such persons in March 1994.
  - (c) Other family persons now comprises the previous groups Other family head, excluding those now counted as Lone parents (79,200 persons in March 1994), the other related full-time students previously classified as Full-time students aged 15-24 (see above; 24,200 in March 1994) and Other relative of married couple or family head (218,100 in March 1994).
- 47. Family type. This classification was previously referred to as Type of family. There are three types of families in the new classification, as follows:
  - (a) Couple families is the term used to describe families previously referred to as Married-couple families. The new category is otherwise exactly comparable with the old category.
  - (b) One parent families now includes those families in which there is a lone parent with only non-dependent children present. Such families were previously included in Other families. There were 208,400 of these families in March 1994.
  - (c) Other families now excludes those families in which there is a lone parent with only non-dependent children present (see above).
- 48. Estimates of the number of families in this publication differ from those in publications prior to the April 1986 issue. This is due to the adoption of a weighting procedure where the weight for a family is determined using an average of the weights for all family members responding to the Labour Force Survey. Previously, the weight used to derive estimates of the number of families was determined by nomination of a proxy 'head of household' as representative of the family.
- 49. From April 1991, labour force birthplace data are aggregated according to major groups of the Australian Standard Classification of Countries for Social Statistics (ASCCSS) (1269.0). The ASCCSS was developed by the ABS for use whenever demographic, labour and social statistics are classified by countries.
- 50. The ASCCSS major groups are based on the concept of geographic proximity. They differ from the country groups presented in this publication prior to April 1991. For example, African countries are now covered by 'The Middle East and North Africa' and 'Africa (excluding North Africa)', while Asia has been split into 'Southeast Asia', 'Northeast Asia' and 'Southern Asia'. Data for selected individual countries will continue to be available in this publication and comprehensively on microfiche.

Birthplace

#### Industry

Additional data

51. From August 1994, Labour Force Survey industry data are classified according to the Australian and New Zealand Standard Industrial Classification (ANZSIC), a detailed description of which appears in ANZSIC 1993 (1292.0). Like the previous Australian Standard Industrial Classification (ASIC), ANZSIC classifies businesses according to their economic activities, in a structure consisting of four levels (Division, Sub-division, Group and Class). Labour Force Survey data are coded at the Group level, as was the practice under ASIC. To assist users in making comparisons with previously published data, a concordance has been developed which shows for each ASIC Group, the corresponding ANZSIC Group or Groups. The concordance also shows the estimated employment attributable to each ANZSIC Group, compared with ASIC Group data, according to establishment unit employment data on the ABS Business Register at May 1994. Historical estimates of employment by ANZSIC Group have been compiled on the basis of the concordance. For further information about the application of ANZSIC to Labour Force Survey data, see Information Paper Labour Force Survey: Introduction of ANZSIC for industry data (Replacement publication) (6259.0) or contact Sylvia Sajler on (06) 252 6525.

- 52. Estimates for employed persons classified by industry, occupation and status in employment are available each February, May, August and November, and the following tables are published in issues of this publication for those months:
  - (a) Employed persons:

Industry (original, seasonally adjusted and trend)
Industry and occupation:

- Full-time and part-time workers
- Status in employment
- Age and birthplace
- Hours worked
- Industry divisions and subdivisions
- Occupation major and minor groups
- Industry by occupation.
- (b) Unemployed persons:

Industry and occupation of last full-time job:

Unemployment rate.

Seasonally adjusted estimates of employed persons by industry have been published in this bulletin since February 1993. Trend estimates have been published since August 1994.

#### TECHNICAL NOTES

A new sample for the LFS was phased in over the period September to December 1992. For information about the sample design see *Information Paper: Labour Force Survey Sample Design* (6269.0).

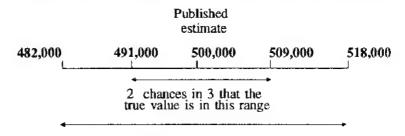

- 2. The labour force estimates are derived from the population survey by use of a complex ratio estimation procedure, which ensures that the survey estimates conform to an independently estimated distribution of the population by age and sex, rather than to the age and sex distribution within the sample itself.
- Two types of error are possible in an estimate based on a sample survey: sampling error and non-sampling error. The sampling error is a measure of the variability that occurs by chance because a sample, rather than the entire population, is surveyed. Since the estimates in this publication are based on information obtained from occupants of a sample of dwellings they, and the movements derived from them, are subject to sampling variability; that is, they may differ from the estimates that would have been produced if all dwellings had been included in the surveys. One measure of the likely difference is given by the standard error, which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included. There are about two chances in three that a sample estimate will differ by less than one standard error from the estimate that would have been obtained if all dwellings had been included, and about nineteen chances in twenty that the difference will be less than two standard errors. Another measure of sampling variability is the relative standard error which is obtained by expressing the standard error as a percentage of the estimate to which it refers. The relative standard error is a useful measure in that it provides an immediate indication of the percentage errors likely to have occurred due to sampling, and thus avoids the need to refer also to the size of the estimate.
- 4. The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by respondents, errors made in collection such as in recording and coding data, and errors made in processing the data. Inaccuracies of this kind are referred to as the *non-sampling error* and they may occur in any enumeration, whether it be a full count or a sample. It is not possible to quantify non-sampling error, but every effort is made to reduce it to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures. For the examples in paragraphs 9 and 11, it is assumed to be zero. In practice, the potential for non-sampling error adds to the uncertainty of the estimates caused by sampling variability.
- 5. Space does not allow for the separate indication of the standard errors of all estimates in this publication. Standard errors of estimates for the latest month and of estimates of movements since the previous month are shown in Table 1. Standard errors of other estimates and other monthly movements should be determined by using Tables A and B.
- 6. The size of the standard error increases with the level of the estimate, so that the larger the estimate the larger is the standard error. However, it should be noted that the larger the sample estimate the smaller will be the standard error in percentage terms. Thus, larger sample estimates will be relatively more reliable than smaller estimates.
- 7. As the standard errors in Table A show, the smaller the estimate the higher is the relative standard error. Very small estimates are subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In the tables in this publication, only estimates with relative standard errors of 25 per cent or less, and percentages

#### Estimation procedure

#### Reliability of the estimates

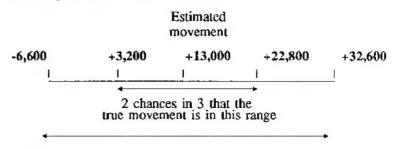

based on such estimates, are considered sufficiently reliable for most purposes. However, estimates and percentages with larger relative standard errors have been included and are preceded by an asterisk (e.g. \*3.4) to indicate they are subject to high standard errors and should be used with caution.

- 8. The movement in the level of an estimate is also subject to sampling variability. The standard error of the movement depends on the levels of the estimates from which the movement is obtained rather than the size of the movement. An indication of the magnitude of standard errors of monthly movements is given in Table B. The estimates of standard error of monthly movements apply only to estimates of movements between two consecutive months. Movements between corresponding months of consecutive quarters (quarterly movements), corresponding months of consecutive years (annual movements) and other non-consecutive months, will generally be subject to somewhat greater sampling variability than is indicated in Table B. Standard errors of quarterly movements can be obtained by multiplying the figures in Table A by 1.11. Standard errors of all annual movements can be obtained by multiplying the figures in Table A by 1.3. When using Table A or Table B to calculate standard errors of movements, refer to the larger of the two estimates from which the movement is derived.
- Examples of the calculation and use of standard errors are given below:
- (a) Consider an estimate for Australia of 500,000 employed persons aged 15-19. By referring to Table A, in the row for an estimate of 500,000 and the column for Australia, a standard error of 9,000 is obtained. There are about two chances in three that the true value (the number that would have been obtained if the whole population had been included in the survey) is within the range 491,000 to 509,000. There are about nineteen chances in twenty that the true value is in the range 482,000 to 518,000.

19 chances in 20 that the true value is in this range

(b) Consider estimates for females employed part time in Australia of 1,387,000 in one month and 1,400,000 in the next month. This represents an upward movement of 13,000. By referring to Table B for the larger estimate of 1,400,000, a movement standard error of 9,800 is obtained (after applying linear interpolation and rounding). Therefore, there are about two chances in three that the true movement is in the range +3,200 to +22,800 and about nineteen chances in twenty that the true movement is in the range -6,600 to +32,600.

19 chances in 20 that the true movement is in this range

10. The relative standard errors of estimates of aggregate hours worked, average hours worked, average duration of unemployment, and median duration of unemployment are obtained by first finding the relative standard error of the estimate of the total number of persons contributing to the estimate (see Table A) and then multiplying the figure so obtained by the following relevant factors:

Aggregate hours worked: 1.2 Average hours worked: 0.7 Average duration of unemployment: 1.3 Median duration of unemployment: 2.0

The levels at which these and other labour force estimates have a relative standard error of 25 per cent are shown in Table C.

- 11. The following is an example of the calculation of standard errors where the use of a factor is required:
- (a) Consider a median duration of unemployment for Australia of 30 weeks, with an estimate of 1,000,000 persons unemployed. Table A gives the standard error as 11,800 which is 1.2 per cent as a relative standard error. The factor of 2.0 (see paragraph 10) is applied to the relative standard error of 1.2 per cent to obtain 2.4 per cent. Therefore the standard error for the median duration of unemployment is 2.4 per cent of 30 weeks, i.e about 1 week. So there are two chances in three that the median duration of unemployment is between 29 and 31 weeks, and about nineteen chances in twenty that it is between 28 and 32 weeks.
- 12. Proportions and percentages (for example, unemployment rates) formed from the ratio of two estimates are also subject to sampling error. The size of the error depends on the accuracy of both the numerator and denominator. The formula for the relative standard error (RSE) of a proportion or percentage is given below:

RSE 
$$(x/y) = \sqrt{[RSE (x)]^2 - [RSE (y)]^2}$$

13. Standard errors contained in Tables A and B are designed to provide an average standard error applicable for all monthly labour force survey estimates. Analysis of the standard errors applicable to particular survey estimates has shown that the standard errors of estimates of employment are generally equivalent to those shown in Tables A and B, while standard errors for estimates of unemployment and persons not in the labour force are approximately 3 per cent and 11 per cent respectively higher than those shown in the tables. Standard errors for capital cities are approximately the same as those for corresponding States. Standard errors of estimates of numbers of families are approximately the same as those for numbers of persons. Standard errors of estimates of persons born in Australia are approximately the same as those shown in Tables A and B. For aggregate estimates of persons born outside Australia the standard errors are about 14 per cent higher. The standard errors vary for individual countries of birth, but are on average about 7 per cent higher.

TABLE A. STANDARD ERRORS OF ESTIMATES FROM SEPTEMBER 1992(a)

Size of estimate	NSW	Vie.	Qld	SA	WA	Tas.	NT	ACT	A	ustralia
					— number —					per cent of estimate
100						90	100	80		
200			210	180	200	130	140	120	190	95.0
300	320	290	260	220	250	160	170	140	240	80.0

#### GLOSSARY

#### Actively looking for work

Includes writing, telephoning or applying in person to an employer for work; answering a newspaper advertisement for a job; checking factory or Commonwealth Employment Service noticeboards; being registered with the Commonwealth Employment Service; checking or registering with any other employment agency; advertising or tendering for work; and contacting friends or relatives.

#### Aggregate hours worked

The total number of hours a group of employed persons has actually worked during the reference week, not necessarily hours paid for.

Attending school

Persons aged 15 to 19 who, during the reference week, were enrolled full time at secondary or high schools.

# Attending tertiary educational institution full time

Persons aged 15 to 24 who, during the reference week, were enrolled full time at a TAFE college, university, or other tertiary educational institution.

Average hours worked

Aggregate hours worked by a group divided by the number of persons in that group.

# Average duration of unemployment

For a group of unemployed persons, the aggregate duration of unemployment divided by the number of persons in the group.

Birthplace

From April 1991, classified according to the Australian Standard Classification of Countries for Social Statistics (ASCCSS) (1269.0).

#### Couple families

Families in which there are two married persons and these persons are husband and wife.

### Dependants

All family members under 15 years of age; all sons or daughters aged 15 to 19 attending school or aged 15 to 24 attending a tertiary educational institution full time (except those classified as husbands, wives or lone parents).

### Dependent student

In couple or one parent families, sons or daughters aged 15 to 19 attending school or aged 15 to 24 attending a tertiary educational institution full time (except those classified as husbands, wives or lone parents).

#### **Duration of unemployment**

The period from the time a person began looking for work or was stood down, to the end of the reference week. Thus the survey measures current (and continuing) periods of unemployment rather than completed spells. For persons who may have begun looking for work while still employed, the duration of unemployment is defined as the period from the time the person last worked full time for two weeks or more to the end of the reference week.

#### **Employed**

Persons aged 15 and over who, during the reference week:

- (a) worked for one hour or more for pay, profit, commission or payment in kind in a job or business, or on a farm (comprising employees, employers and own account workers); or
- (b) worked for one hour or more without pay in a family business or on a farm (i.e. contributing family workers); or
- (c) were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than four weeks up to the end of the reference week; stood down without pay because of bad weather or plant breakdown at their place of employment for less than four weeks up to the end of the reference week; on strike or locked out; on workers' compensation and expected to be returning to their job; or receiving wages or salary while undertaking full-time study; or
- (d) were employers, own account workers or contributing family workers who had a job, business or farm, but were not at work,

#### Employment/population ratio

For any group, the number of employed persons expressed as a percentage of the civilian population aged 15 and over in the same group.

Family

Two or more related persons (relationship includes relationships by blood, marriage or adoption) usually resident in the same household at the time of the survey. A family comprises a married couple or a family head as defined, together with any persons having any of the following relationships to them:

- sons or daughters of any age, if not married and with no children of their own present;
- (b) other relatives if not accompanied by a spouse, sons or daughters, or parents of their own; or
- (c) any children under 15 years of age who do not have a parent present.
- (a) Any person without a spouse present, but with a son or daughter aged under 15 present; or
- (b) persons without a spouse present, without a son or daughter aged under 15 present, but with a son or daughter aged 15 or over present (provided that the son or daughter has no spouse, son or daughter of his/her own present); or
- (c) where a family has no person falling into either of these categories, the family head is generally defined to be the eldest person in the family.

No family head is determined for a couple family.

Unemployed persons who have previously worked full time for two weeks or more but not in the past two years.

Employed persons who usually worked 35 hours or more a week (in all jobs) and others who, although usually working less than 35 hours a week, worked 35 hours or more during the reference week.

A group of one or more persons in a private dwelling who consider themselves to be separate from other persons (if any) in the dwelling, and who make regular provision to take meals separately from other persons, i.e. at different times or in different rooms. Lodgers who receive accommodation but not meals are treated as separate households. Boarders who receive both accommodation and meals are not treated as separate households. A household may consist of any number of families and non-family members.

From August 1994, classified according to the Australian and New Zealand Standard Industrial Classification (ANZSIC) 1993 (1292.0).

Unemployed persons who have worked full time for two weeks or more in the past two years and *left that job voluntarily*, that is, because of unsatisfactory work arrangements/pay/hours; the job was seasonal, temporary or a holiday job and they left that job to return to studies; their last job was running their own business and they closed down or sold that business for reasons other than financial difficulties; or any other reasons.

Unemployed persons who have worked full time for two weeks or more in the past two years and *left that job involuntarily*, that is: were laid off or retrenched from that job; left that job because of their own ill-health or injury; the job was seasonal, temporary or a holiday job and they did not leave that job to return to studies; or their last job was running their own business and the business closed down because of financial difficulties.

For any group, persons who were employed or unemployed, as defined.

A classification of the civilian population aged 15 and over into employed, unemployed or not in the labour force, as defined. The definitions conform closely to the international standard definitions adopted by the International Conferences of Labour Statisticians.

A person who is the sole member of a household.

The head of a one parent family.

Family head

Former workers

Full-time workers

Household

Industry

Job leavers

Job losers

Labour force

Labour force status

Lone person

Lone parent

ly lived in the household.

Long-term unemployed

Persons unemployed for a period of 52 weeks or more.

Main English Speaking Countries

The United Kingdom, Ireland, South Africa, Canada, the United States of America and New Zealand.

Marital status

Persons are classified as married (husband and wife) if they are reported as being married (including de facto) and their spouse was a usual resident of the household at the time of the survey. The not-married category comprises persons who have never married, or are separated, widowed or divorced, as well as those who, although reported as being married, did not have a spouse who usual-

Median duration of unemployment

The duration which divides unemployed persons into two equal groups, one comprising persons whose duration of unemployment is above the median and the other, persons whose duration is below it.

Non-dependent child

In couple or one parent families, sons or daughters aged 15 and over not attending school or a tertiary educational institution full time (except those classified as husbands, wives or lone parents).

Non-family member

A person who is not related to any other member of the household in which they are living.

Not in the labour force

Persons who were not in the categories employed or unemployed, as defined. They include persons who were keeping house (unpaid), retired, voluntarily inactive, permanently unable to work, persons in institutions (hospitals, gaols, sanatoriums, etc.), trainee teachers, members of contemplative religious orders, and persons whose only activity during the reference week was jury service or unpaid voluntary work for a charitable organisation.

Occupation

Classified according to the Australian Standard Classification of Occupations (ASCO) 1986 (1222,0).

One parent families

Families in which there is a family head together with at least one son or daughter of his/her own.

Other families

Families which are not couple families or one parent families, as defined. They include families in which there is no parent, for example a family head living with a brother or sister.

Participation rate

For any group, the labour force expressed as a percentage of the civilian population aged 15 and over in the same group. Participation rates for persons classified by birthplace are calculated using population estimates which exclude those in institutions. Participation rates for persons classified by school or tertiary educational institution attendance are calculated using population estimates which include those in institutions.

Part-time workers

Employed persons who usually worked less than 35 hours a week and who did so during the reference week.

Seasonally adjusted series

A time series of estimates with the estimated effects of normal seasonal variation removed. See paragraphs 28 and 29 of the Explanatory Notes for more detail.

State capital cities

The areas determining the six State capital cities are the Statistical Divisions for those capital cities defined in the Australian Standard Geographical Classification (ASGC) Manual, Edition 2.1 (1216.0).

Status in employment

Employed persons classified by whether they were employers, own account workers, employees, or contributing family workers.

Trend series

A smoothed seasonally adjusted series of estimates. See paragraphs 30 to 33 of the Explanatory Notes for more detail.

#### Unemployed

Persons aged 15 and over who were not employed during the reference week, and:

- (a) had actively looked for full-time or part-time work at any time in the four weeks up to the end of the reference week and:
  - (i) were available for work in the reference week, or would have been available except for temporary illness (i.e. lasting for less than four weeks to the end of the reference week); or
  - (ii) were waiting to start a new job within four weeks from the end of the reference week and would have started in the reference week if the job had been available then; or
- (b) were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than four weeks up to the end of the reference week (including the whole of the reference week) for reasons other than bad weather or plant breakdown.

Unemployed persons classified by industry and occupation

Unemployed persons who had worked full time for two weeks or more in the last two years are classified according to the industry and occupation of their most recent full-time job.

Unemployed looking for first full-time job

Unemployed persons looking for full-time work who had never worked full time for two weeks or more.

Unemployed looking for first job

Unemployed persons who had never worked full time for two weeks or more.

Unemployed looking for full-time work

Unemployed persons who actively looked for full-time work or were to resume a full-time job, from which they had been stood down.

Unemployed looking for part-time work

Unemployed persons who had actively looked for part-time work only, or were to resume a part-time job, from which they had been stood down.

Unemployment rate

For any group, the number of unemployed persons expressed as a percentage of the labour force in the same group.

#### APPENDIX

### SEASONAL REANALYSIS OF MONTHLY LABOUR FORCE SURVEY ESTIMATES: EXPLANATORY NOTES

#### Introduction

Seasonally adjusted series

This appendix contains tables of original, seasonally adjusted and trend monthly labour force series for Australia and the six States and tables of original and trend series for the Northern Territory and the Australian Capital Territory for the period January 1990 to February 1995. The seasonally adjusted and trend estimates back to 1978 have been revised following the annual reanalysis which takes account of an additional 12 months' original data. Minor revisions only have been made to the series prior to January 1990. Selected series are available on PC-AUSSTATS back to 1978.

- 2. As happens with all seasonally adjusted series, the seasonal factors are reviewed when a further year's estimates become available. Generally, additional estimates provide information about recent changes in the seasonal pattern and consequently the adjustment factors are revised (as they have been for this publication). It follows that the seasonally adjusted estimates in the following tables are likely to be revised at the next annual review.
- 3. The seasonally adjusted estimates still reflect the sampling and non-sampling errors to which the original figures are subject. Furthermore, the seasonal adjustment process does not attempt to remove the effect of random influences (such as industrial disputes) on the estimates.
- 4. For Australia, seasonally adjusted estimates for persons have been obtained by the addition of the independently adjusted series for males and females. The adjusted series for males (females) looking for full-time work are the addition of those aged 15 to 19 and for those aged 20 and over. Seasonally adjusted estimates for males (females) looking for part-time work are then added to the above estimates to obtain seasonally adjusted estimates of total unemployed. Adjusted estimates for employed persons are the aggregation of independently adjusted series for persons employed full time and persons employed part time. The full-time employment series is obtained by aggregating the series for full-time workers aged 15 to 19 and those aged 20 and over. The adjusted estimates for the labour force are the addition of the adjusted series for the employed and unemployed. Seasonally adjusted unemployment rates have been produced using the seasonally adjusted unemployment data and the seasonally adjusted labour force. Participation rates have been adjusted using seasonally adjusted labour force data and population estimates.
- 5. For the six States, seasonally adjusted estimates for persons have been obtained by the addition of the independently adjusted series for males and females. The adjusted estimates for the labour force are the addition of the adjusted series for the employed and unemployed. Seasonally adjusted unemployment rates have been produced using seasonally adjusted unemployment data and the seasonally adjusted labour force. Participation rates have been adjusted using seasonally adjusted labour force data and population estimates.
- 6. Further information concerning the method of adjustment used in the revised series and other information on the seasonal adjustment process was included in the 1983 issue of *Seasonally Adjusted Indicators*, *Australia* (1308.0).
- 7. Seasonally adjusted labour force data are published monthly in *The Labour Force*, *Australia Preliminary* (6202.0) as well as in this publication (see Tables 2, 8 and 40). These estimates are also available on PC-AUSSTATS, floppy disk or as a special data service. Contact Sylvia Sajler on Canberra (06) 252 6525 for further information.

Trend series

- 8. Seasonally adjusted quarterly labour force data for the period August 1966 to November 1977 are published in *The Labour Force*, *Australia*, *Historical Summary*, 1966 to 1984 (6204.0). That publication also contains information on the relationship between quarterly and monthly seasonally adjusted series.
- 9. As explained in paragraphs 34 and 35 of the Explanatory Notes, when a 13-term Henderson-weighted moving average is applied to a seasonally adjusted series, a trend series results which can be used to analyse the underlying behaviour of the series over time. This is because the smoothing technique reduces the impact of the residual/irregular influences which cause variability in the series.
- 10. For Australia, trend estimates for persons have been obtained by the addition of the independently calculated series for males and females. The trend series for males (females) looking for full-time work are the addition of trend estimates for those aged 15 to 19 and for those aged 20 and over. Trend estimates for males (females) looking for part-time work are then added to the above estimates to obtain trend estimates of total unemployment. Trend estimates for employed persons are the aggregation of independently calculated series for persons employed full time and persons employed part time. The full-time employment series is obtained by aggregating the series for full-time workers aged 15 to 19 and those aged 20 and over. Trend estimates for the labour force are the addition of the trend series for employment and unemployment. Trend unemployment rates have been produced using trend unemployment data and the trend labour force. Participation rates have been calculated using trend labour force data and population estimates.
- 11. For the six States and two Territories, trend estimates for persons have been obtained by the addition of the independently calculated series for males and females. Trend estimates for the labour force are the addition of the trend series for the employed and unemployed. Trend unemployment rates have been produced using trend unemployment data and the trend labour force estimates. Participation rates have been adjusted using trend labour force data and population estimates.
- 12. Trend series are published monthly in *The Labour Force*, *Australia Preliminary* (6202.0) as well as in this publication (see Tables 3, 9 and 41), on PC-AUSSTATS, floppy disk or as a special data service. Contact Sylvia Sajler on Canberra (06) 252 6525 for further information.
- 13. Trend series of employment by ANZSIC industry Division are given in Table 119, starting from February 1985. See paragraph 52 of the Explanatory Notes for information about the introduction of ANZSIC in August 1994, and the methods used to backcast employment series up to May 1994.

#### SECTION B: SUPPLEMENTARY LABOUR DATA

MULTIPLE JOBHOLDING, AUGUST 1994
PERSONS NOT IN THE LABOUR FORCE, SEPTEMBER 1994
UNDEREMPLOYED WORKERS, SEPTEMBER 1994

#### SUPPLEMENTARY AND SPECIAL SURVEYS

The supplementary and special surveys collect data on particular aspects of the labour force. The following is a historical list of supplementary and special labour force surveys. Statistical tables formerly published in these bulletins are available as a Standard Data Service from January 1995, by subscription or on request. Inquiries should be made to the contact in the Phone Inquiries box on the Contents page. It may be possible to order Unit Record Files on the following supplementary and special surveys by contacting any ABS Office (see Phone Inquiries box on the Contents page).

Title of Publication	Catalogue No
Alternative Working Arrangements, Australia, March to May 1982, September to November 1986	6341.0
Annual and Long Service Leave Taken, Australia, May 1988 to April 1989	6317.0
Career Experience, Australia. Three-yearly. First issue February 1993	6254.0
Career Paths of Persons with Trade Qualifications, Australia, 1989	6243.0

#### **MULTIPLE JOBHOLDING, AUGUST 1994**

A survey measuring multiple jobholding was conducted in August 1994 as a supplement to the monthly Labour Force Survey.

'Multiple jobholders' refers to persons who held a second job and were an employee in at least one of their jobs. In August 1994, there were 404,100 persons aged 15 years and over who were multiple jobholders.

The proportion of employed persons who were multiple jobholders was 5.1 per cent in August 1994. After a slight fall from 2.9 per cent in August 1981 to 2.8 per cent in August 1983, this ratio has been rising steadily. As a proportion of the labour force, the number of multiple jobholders fell slightly from 2.7 per cent in August 1981 to 2.6 per cent in August 1983 and was 4.7 per cent in August 1994.

The proportion of multiple jobholders who were female generally increased over the period 1981 to 1994. In August 1981, 34 per cent of multiple jobholders were female, rising to 51 per cent in July 1991 before falling slightly to 50 per cent in August 1994. Although this overall increase reflects the growth in female employment to some extent, the number of female multiple jobholders has more than doubled between August 1981 and August 1994, while in comparison, the number of employed females has increased 43 per cent over the same period.

As a proportion of all employed females, the number of female multiple jobholders has increased from 2.7 per cent in August 1981 to 6.1 per cent in August 1994. In comparison, the proportion of employed males who were multiple jobholders increased by a smaller amount over the same period, from 3.0 per cent in August 1981 to 4.4 per cent in August 1994 (Table 1).

In August 1994, almost three-quarters (73%) of female multiple jobholders worked less than 35 hours in their main job during the reference week. In contrast, 36 per cent of male multiple jobholders worked less than 35 hours, while 18 per cent worked more than 48 hours in their main job.

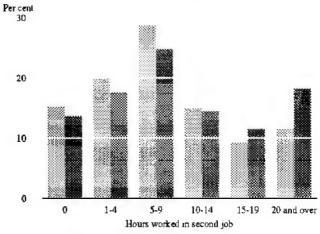

Some two-thirds (66%) of female multiple jobholders worked less than 10 hours in their second job during the reference week, compared with 55 per cent of male multiple jobholders.

Of all multiple jobholders who worked 35 hours or more in their main job, 56 per cent worked less than 10 hours in their second job while 18 per cent worked 20 hours or more in their second job. Some 88 per cent of multiple jobholders who worked less than 15 hours in their main job during the reference week also worked less than 15 hours in their second job (Table 5, Diagram 1).

Comparison over time 1981 to 1994

Hours worked in main and second job

#### DIAGRAM 1. MULTIPLE JOBHOLDERS: HOURS WORKED IN MAIN AND SECOND JOB, AUGUST 1994

Source: Table 5

- Worked less than 35 hours in main job
- ₩ Worked 35 hours or more in main job

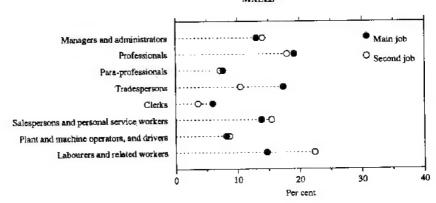

Occupation of main and second job

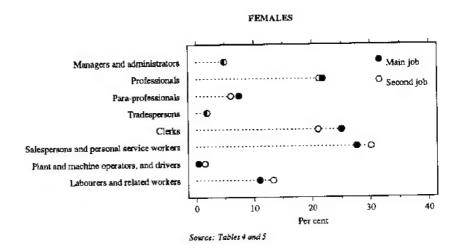

Of females holding two jobs, 28 per cent were employed in their main job as Salespersons and personal service workers and 25 per cent as Clerks.

Some 30 per cent of female multiple jobholders worked as Salespersons and personal service workers in their second job, while 21 per cent were Professionals and a further 21 per cent worked as Clerks in their second job.

For males, 19 per cent of multiple jobholders were employed as Professionals in their main job and 17 per cent as Tradespersons. Labourers and related workers (22%) and Professionals (18%) were the occupations in which the greatest proportions of male multiple jobholders worked in their second job (Tables 4 and 5, Diagram 2).

DIAGRAM 2. MULTIPLE JOBHOLDERS: OCCUPATION OF MAIN AND SECOND JOB AND SEX AUGUST 1994
MALES

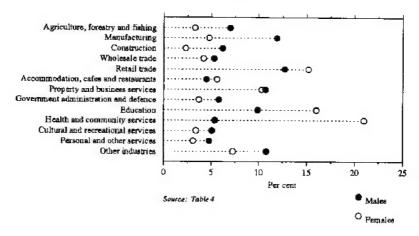

Industry of main and second job

The proportions of male multiple jobholders by industry of main job were distributed across all industry divisions, ranging from 4.5 per cent in the Accommodation, cafes and restaurants industry to 13 per cent in the Retail trade industry.

In comparison, over half of female multiple jobholders were employed in just three industries in their main job, namely Health and community services (21%), Education (16%) and Retail trade (15%) (Table 4, Diagram 3). These three industries were also the largest employers of female multiple jobholders in their second job, employing 17, 16 and 15 per cent respectively (Table 5).

DIAGRAM 3. MULTIPLE JOBHOLDERS: INDUSTRY OF MAIN JOB AND SEX, AUGUST 1994

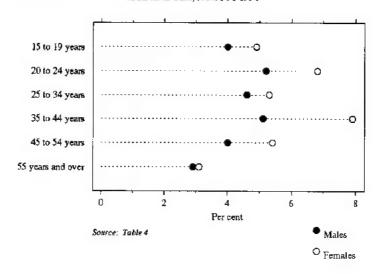

As a proportion of all persons employed in the Cultural and recreational services industry in their main and/or second job, 9.8 per cent were multiple jobholders who worked in this industry in their main job. The Manufacturing and Construction industries recorded the lowest proportion (3.0%) of persons holding two jobs working in these industries in their main job (Table 4).

As a proportion of all persons (including main and second jobs) working in the Cultural and recreational services industry, 18 per cent were multiple jobholders who worked in this industry in their second job. The Manufacturing industry was the industry in which the lowest proportion of multiple jobholders worked in their second job (2.0%) (Table 3).

The 35 to 44 years age group had the highest proportion of employed persons who were multiple jobholders - about one-third of all multiple jobholders were in this age group. Of all employed males aged 35 to 44 years, 5.1 per cent held a second job while 7.9 per cent of employed females in this age group were multiple jobholders.

Employed females were more likely to hold a second job than males in all age groups. The proportions of employed females who were multiple jobholders ranged from 3.1 per cent for females aged 55 and over, to 7.9 per cent for females aged 35 to 44. For employed males, the proportions who were multiple jobholders ranged from 2.9 per cent for those aged 55 and over, to 5.2 per cent for those aged 20 to 24 (Table 4, Diagram 4).

DIAGRAM 4. MULTIPLE JOBHOLDERS AS A PROPORTION OF EMPLOYED PERSONS, AGE AND SEX, AUGUST 1994

Age

Relationship in household

Multiple jobholders were most likely to be a husband or wife with dependants. This group represented 41 per cent of multiple jobholders, compared with 37 per cent of all employed persons, in August 1994 (Table 4).

Country of birth

Some 80 per cent of multiple jobholders were born in Australia (compared with 76 per cent of all employed persons). Of multiple jobholders born outside Australia, 53 per cent were born in main-English speaking countries (in comparison, 45 per cent of employed persons born outside Australia were from main English-speaking countries) (Table 4).

# PERSONS NOT IN THE LABOUR FORCE, SEPTEMBER 1994

A survey of persons who were not in the labour force was conducted in September 1994 as a supplement to the monthly Labour Force Survey. The survey focussed on the degree of attachment of these people to the labour force. This may range from persons who have retired from work, and who have no further interest in obtaining work, to others who are actively looking for work, but are not yet available to start work.

The scope of the survey was persons aged 15 to 69 years who were neither employed nor unemployed. Boarding school pupils and persons living in institutions were excluded - they are assumed to be not in the labour force, and to have no current attachment to the labour force.

## DIAGRAM 1. LABOUR FORCE STATUS AND MARGINAL ATTACHMENT TO THE LABOUR FORCE, SEPTEMBER 1994

(a) Includes 196,100 institutionalised persons, boarding school pupils and persons permanently unable to work.

Source. Table 1 and The Labour Force, Australia, September 1994 (6203.0)

Overview

Persons not in the labour force (excluding institutionalised persons and boarding school pupils) numbered 3,563,000 persons of whom 2,401,300 (67%) were female and 1,161,700 were male.

The age distribution of males not in the labour force shows high concentrations in the "student" (15-19 years) and "retired" (60-69 years) age groups. For females the age groups with the highest numbers of persons not in the labour force were 25-34 years and 35-44 years, although for all age groups beyond the 15-19 years group, more females than males were not in the labour force (Table 4).

Main activity when not in the labour force

For males, the most commonly reported main activities whilst not in the labour force were 'retired or voluntarily inactive' (36%), 'attending an educational institution' (31%) and 'own illness, injury, disability or handicap' (21%). By comparison, the most commonly reported main activities for females were 'home duties or childcare' (67%), 'attending an educational institution' (14%) and 'retired or voluntarily inactive' (10%) (Table 4).

Time since last job

Some 81 per cent of persons who were not in the labour force had previously had a job and 19 per cent had never had a job. Of the 875,900 males who previously had a job —

- 57 per cent had their last job within the last 5 years;
- 25 per cent had their last job between 5 and 10 years ago; and
- 17 per cent had their last job 10 years or more ago.

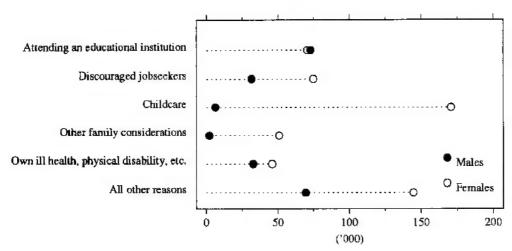

In contrast, of the 2,010,200 females who previously had a job —

- 40 per cent had their last job within the last 5 years;
- 19 per cent had their last job between 5 and 10 years ago; and
- 41 per cent had their last job more than 10 years ago (Table 4).

Persons not in the labour force with marginal attachment

Persons not in the labour force can be classified as either having or not having marginal attachment to the labour force. A person is marginally attached to the labour force if they are neither employed nor unemployed but nevertheless want to work and are either seeking work or available to start work within four weeks (see Glossary for further details). Some 21 per cent of all persons not in the labour force were marginally attached to the labour force, a decrease of 3.0 percentage points from September 1993 and unchanged from the September 1990 survey (Table 1).

# DIAGRAM 2. PERSONS WITH MARGINAL ATTACHMENT TO THE LABOUR FORCE: MAIN REASON FOR NOT ACTIVELY LOOKING FOR WORK, SEPTEMBER 1994

Source: Table 2

Of the 773,300 persons marginally attached to the labour force, 61,400 (8%) were actively looking for work and 712,000 (92%) were not actively looking for work, but were available to start work within four weeks. Of the 190,200 males in this latter group the most commonly reported main reasons for not actively looking for work were attending an educational institution (37%), personal/family reasons (33%) and labour market related reasons (17%). For the 521,800 females in this group, the most frequently reported reason for not actively looking for work was childcare (33%), followed by labour market related reasons (16%), attending an educational institution (13%), and other personal reasons (18%) (Table 2).

#### Discouraged jobseekers

The estimate of discouraged jobseekers at September 1994 was 106,500, a decrease of 40,900 persons from September 1993 and the lowest level recorded since September 1990.

The proportion of discouraged jobseekers as a component of all persons not in the labour force has decreased to 3 per cent, after remaining steady at 4 per cent since September 1991 (Table 1).

Some 70 per cent of discouraged jobseekers were female. Of the 74,800 females who were discouraged jobseekers —

- 9 per cent were aged 15 to 24 years;
- 62 per cent were aged 25 to 54 years;
- 29 per cent were aged 55 to 69 years.

By comparison, of the 31,700 males who were discouraged jobseekers ---

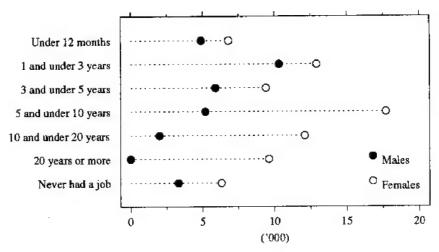

- 15 per cent were aged 15 to 24 years;
- 12 per cent were aged 25 to 54 years;
- 73 per cent were aged 55 to 69 years (Table 3).

The ratio of male discouraged jobseekers to total male unemployment has ranged between 6.5 per cent (in 1994) to 7.1 per cent (in 1993) in the past five years. For females the ratio was steady at 29 or 30 per cent between 1990 and 1993, but dropped to 22 per cent in 1994.

Some 44 per cent of male discouraged jobseekers had looked for work in the past twelve months (but not in the past month), and 56 per cent intended to look for work in the next twelve months.

For female discouraged jobseekers, 28 per cent had looked for work in the previous twelve months, and 57 per cent intended to look for work in the next twelve months.

## UNDEREMPLOYED WORKERS, SEPTEMBER 1994

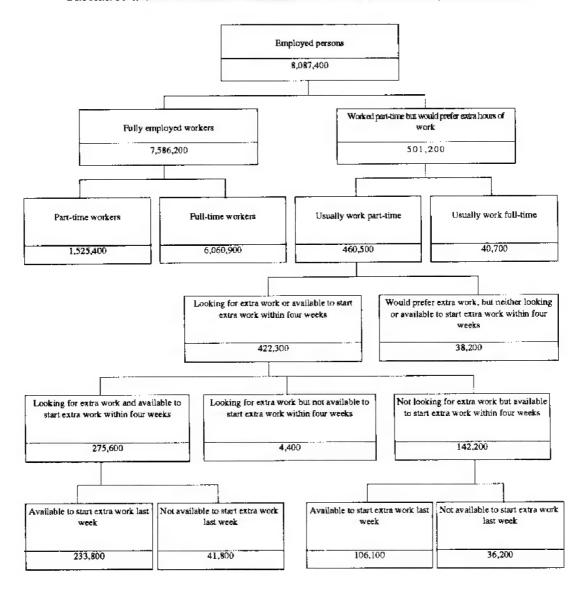

A survey of persons who were underemployed was conducted in September 1994 as a supplement to the monthly Labour Force Survey. The survey focussed on those persons who worked part-time hours in the reference week, but would prefer to work more hours.

The concept of underemployment embraces two principal forms —

- visible underemployment, involving an insufficient volume of work; and
- invisible underemployment characterised by low income, underutilisation of skill, low productivity and other factors.

The ABS survey was confined to studying visible underemployment among those persons who worked part-time hours in the reference week. The scope of the survey included those part-time workers who would prefer to work more hours and full-time workers who worked part-time hours in the reference week for economic reasons.

DIAGRAM 1. EMPLOYED PERSONS PREFERRING TO WORK MORE HOURS, SEPTEMBER 1994

Overview

In September 1994 there were 8,087,400 employed persons aged 15 years and over, of whom 7,586,200 (94%) were satisfied with the hours they worked - i.e. were fully employed.

Of the 501,200 employed persons who would prefer to work more hours, 460,500 (92%) were usually part-time workers, and 40,700 were full-time workers who worked less than 35 hours in the reference week for economic reasons (e.g. on short-time, had insufficient work, etc.).

Employed persons who want to work more hours may be grouped with unemployed persons to represent all persons not fully employed. In September 1994 unemployed persons numbered 830,800 persons (9.3 per cent of the labour force) and employed persons who wanted to work more hours represented 5.6 per cent of the labour force.

These groups are not strictly comparable, however, because more stringent criteria (active job search and availability) are applied to classify persons as unemployed. When similar criteria are applied to those persons usually working part-time who would prefer to work more hours, their numbers reduce from 460,500 persons to 233,800 or 2.6 per cent of the labour force.

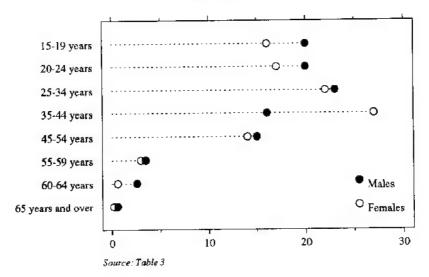

Of the 210,900 males who would prefer to work more hours -

- 40 per cent were aged 15 to 24 years;
- 39 per cent were aged 25 to 44 years; and
- 21 per cent were aged 45 years and over.

and for the 290,200 females who would prefer to work more hours -

- 32 per cent were aged 15 to 24 years;
- 50 per cent were aged 25 to 44 years; and
- 18 per cent were aged 45 years and over.

#### DIAGRAM 2: PROPORTION OF EMPLOYED PERSONS WHO WOULD PREFER TO WORK MORE HOURS BY AGE AND SEX, SEPTEMBER 1994 (per cent)

Age

#### Relationship in household

Some 81 per cent of employed persons who would prefer more hours were members of a family (compared with 82 per cent of persons who were fully employed).

Some 7 per cent of persons who would prefer to work more hours were lone parents (compared with 3 per cent of fully employed workers). Other "family members" over-represented among those who wanted to work more hours were dependent students (10% compared with 3% of fully employed) and non-dependent children (17% compared with 11% of fully employed) (Table 3).

Status in employment

Employees represented 81 per cent of employees who wanted to work more hours, compared with 85 per cent of persons fully employed. Own account workers (i.e. self employed without employees) represented 14 per cent of those wanting to work more hours compared with 10 per cent of fully employed workers (Table 3).

Job search and availability

Of the 460,500 part-time workers who would prefer to work more hours, 92 per cent had either been looking for work with more hours or were available to start such work within four weeks. Of this group of 422,300 persons:

- 275,600 (65%) persons had been looking for work with more hours and were available to start such work within four weeks (of this group, 233,800, or 85 per cent, were available to start such work in the survey reference week);
- 142,200 (34%) had not been looking for work with more hours but were available to start such work within four weeks. Of these, an estimated 106,100 or 75 per cent, were available to start such work in the survey reference week; and
- 4,400 (1%) were looking for work with more hours but were not available to start such work within four weeks (Table 2).

Extra hours on offer

The sum of the preferred number of extra hours reported for the 386,100 part-time workers who had either been looking for work with more hours or were available to start such work in the reference week was 6,852,100 hours per week. In total, males would have preferred to work an extra 3,132,400 hours per week and females an extra 3,719,600 per week (Table 4). On average, males in this group would have preferred to work an extra 17.5 hours per week, and for females the estimate was 13.2 hours.

#### SUPPLEMENTARY SURVEYS: EXPLANATORY NOTES

This publication contains some results of supplementary surveys run in association with the August 1994 and September 1994 monthly Labour Force Surveys conducted throughout Australia. These surveys were 'Multiple Jobholding' run in August 1994 and 'Persons Not In the Labour Force' and 'Underemployed

August 1994 and 'Persons Not In the Labour Force' and 'Underemple Workers' run in September 1994.

2. For the August 1994 surveys respondents to the Labour Force Survey who fell within the scope of the supplementary survey were also asked additional questions about the nature and extent of multiple jobholding.

- 3. For the September 1994 surveys, respondents to the Labour Force Survey who fell within the scope of the September 1994 supplementary survey were also asked additional questions. They were asked about their labour force aspirations and, if appropriate, their reasons for not actively looking for work and their availability for work. They were also asked about their type and duration of current period of looking for more work; educational attainment; main difficulty in finding extra hours of work and preferred number of extra hours.
- 4. The scope of the 'Multiple Jobholding' supplementary survey was the same as that used for the Labour Force Survey (described in full in *The Labour Force*, Australia (6203.0)) except that it was restricted to persons who stated that they had more than one job in the reference week and were an employee in at least one of their jobs. The survey excluded persons who worked solely for payment in kind.
- 5. The scope of the 'Underemployed Workers' survey was confined to employed persons who wanted to work more hours who were in scope for the Labour Force Survey.
- 6. The scope of the 'Persons Not In the Labour Force' survey was the same as that used for the Labour Force Survey except that it was restricted to persons not in the labour force aged 15 to 69. Institutionalised persons and boarding school pupils have also been excluded except where otherwise indicated.
- 7. The coverage rules of these supplementary surveys are the same as that used for the Labour Force Survey. These rules aim to ensure that each person is associated with only one dwelling, and hence has only one chance of selection.
- 8. Definitions of labour force and demographic classifications appearing in this publication are given in the Glossary in Section A. Other definitions specific to the supplementary surveys are given in the Glossary in this section.
- 9. Unless otherwise stated, all characteristics referenced in this publication relate to the week before the interview (i.e. the reference week) and, for the Multiple Jobholding survey, to all jobs.
- 10. The estimates in this section of the publication refer to information collected in the survey month and, due to seasonal factors, may not be representative of other months of the year.
- 11. Results of similar surveys on multiple jobholding, conducted two-yearly from August 1973 to August 1987, and in July 1991, have been given in issues of the discontinued publication *Multiple Jobholding*, *Australia* (6216.0).
- 12. Results of similar surveys on persons not in the labour force, conducted annually since November 1975, have been given in issues of the discontinued publication *Persons Not in the Labour Force, Australia* (6220.0).
- 13. Results of similar surveys on underemployed workers, conducted in May 1985, May 1988 and May 1991, were given in previous issues of the discontinued publication *Underemployed Workers*, *Australia* (6265.0).

Introduction

Scope

Coverage

**Definitions** 

Results of the survey

- 14. Statistical tables formerly published in these bulletins are now available as Standard Data Services, available on subscription or on request. Inquiries should be made to the contact officer in the Phone Inquiries box at the front of this publication.
- 15. It is expected that the survey 'Multiple Jobholding' will be conducted next in August 1998.
- 16. It is expected that the surveys 'Persons Not in the Labour Force' and 'Underemployed Workers' will be conducted next in September 1995.

## 17. The scope of the 'Persons Not In the Labour Force' surveys run prior to September 1988 included all persons aged 15 and over. In September 1988 the

- September 1988 included all persons aged 15 and over. In September 1988 the survey was restricted to exclude all persons aged 70 and over.

  18. From February 1994, the monthly Labour Force Survey and supplementary
- 18. From February 1994, the monthly Labour Force Survey and supplementary surveys are based on population estimates from the 1991 Census of Population and Housing. While historical monthly labour force estimates were revised back to January 1989, results of supplementary surveys conducted before February 1994 have not been revised and are based on population estimates from the 1986 Census of Population and Housing.
- 19. The change to population estimates based on the 1991 Census of Population and Housing resulted in a downward revision to the size of the in-scope civilian population aged 15 and over (the January 1994 estimate of this population was revised from 13,960,400 to 13,860,400, a downward revision of 100,000 or approximately 1 per cent).
- 20. This change in the base population estimates should be considered when comparing the results of supplementary surveys conducted before February 1994 with results of those conducted after February 1994.

# 21. In previous years these surveys have been conducted on a full sample of dwellings selected in the Labour Force Survey. Since July 1994, the sample of the supplementary surveys have been reduced to seven-eighths of the Labour Force Survey sample. As a result the standard errors for these surveys differ from those applicable to previous surveys.

- 22. As well as the statistics included in these articles, the ABS has other relevant unpublished data available. Inquiries should be made to the contact officer in the Phone Inquiries box at the front of this publication.
- 23. Estimates in this publication are subject to sampling and non-sampling errors. For more information about the standard errors appropriate to these supplementary surveys, inquiries should be made to the contact officer in the Phone Inquiries box at the front of this publication.
- 24. Because estimates have been rounded, discrepancies may occur between sums of the component items and totals.
- subject to sampling variability too high for most practical uses
   (i.e. relative standard error greater than 25%)
- . , not applicable
- n.a. not available

#### Discontinuities in the series

#### Survey sample redesign

#### Unpublished statistics

#### Reliability of the estimates

#### SUPPLEMENTARY SURVEYS: GLOSSARY

## Available to start work within four weeks

Discouraged jobseekers

Those persons who were available to start work within four weeks or could start work if childcare was available.

Persons with marginal attachment to the labour force who wanted to work and were available to start work within the next four weeks but whose main reason for not taking active steps to find work was that they believed they would not find a job for any of the following reasons:

- (a) considered to be too young or too old by employers; or
- (b) difficulties with language or ethnic background; or
- (c) lacked the necessary schooling, training, skills or experience; or
- (d) no jobs in their locality or line of work; or
- (e) no jobs available at all.

Duration of current period of insufficient work

The period from the time the person wanted extra hours to the end of the reference week. Periods are recorded in full weeks and this results in a slight understatement of duration. Average (mean) duration is obtained by dividing the aggregate number of weeks a group has wanted extra hours of work by the number of persons in that group. Median duration is that which divides persons into two equal groups, one comprising persons whose duration of insufficient work is above the median and the other, persons whose duration is below it.

**Employed persons** 

. . .

Employees

**Employer** 

Family reasons

Had a job to to go

Hours worked

Institutionalised persons

Job

Main job

Marginal attachment to the labour force

Persons aged 15 and over who were classified as either an employer, own account worker or an employee.

Employed persons aged 15 and over who worked: for an employer for wages or salary; or in their own business, either with or without employees, if that business was a limited liability company.

Employed persons aged 15 and over who worked in their own business (with employees), did not pay themselves a wage or salary and the business was not a limited liability company.

Includes ill health of other than self, unable to find suitable childcare, children too young or prefers to look after children and other family considerations.

Includes persons who had a job but, up to the end of the reference week, had been away from work without pay for four weeks or longer and had not been actively looking for work.

Actual hours worked during the reference week (i.e. the week before the interview), not necessarily hours paid for. Thus, if a person had been on leave for the whole week, hours worked would have been recorded as nil.

Includes some patients in hospitals, and sanitoriums and inmates of reformatories, gaols, etc.

Any employment, full-time or part-time, lasting two weeks or more.

The job in which most hours were usually worked.

Persons who were not in the labour force in the reference week, wanted to work and:

- (a) were actively looking for work but did not meet the criteria to be classified as unemployed; or
- (b) were not actively looking for work but were available to start work within four weeks or could start work within four weeks if childcare was available.

The criteria determining those in the labour force are based on activity (i.e. working or looking for work) during the reference week. The criteria associated with marginal attachment to the labour force, in particular the concepts of wanting to work, reasons for not actively looking for work and availability to start work, are more subjective. Hence, the measurement against these criteria is affected by the respondent's own interpretation of the concepts used. An individual respondent's interpretation is affected by such factors as the respondent's work aspirations, as well as family, economic and other commitments.

Multiple jobholders

Employed persons who, during the reference week:

- (a) worked in a second job or held a second job from which they were absent because of holidays, sickness or any other reason; and
- (b) were an employee in at least one of their jobs.

Not in the labour force and wanted to work

#### Persons who:

- (a) in the four weeks up to the end of the reference week had taken active steps to find work but did not meet the criteria to be classified as unemployed; or
- (b) although claiming to have looked for work (in the four weeks up to the end of the reference week), had not taken active steps to find work; or
- (c) in the four weeks up to the end of the reference week had not looked for work but in the survey answered 'yes' or 'maybe' to the question 'Even though you have not been looking for work would you like a full-time or part-time job?'; or
- (d) in the four weeks up to the end of the reference week, had not looked for work but were responsible for children under twelve years of age and answered 'yes' or 'maybe' to the question 'If you had suitable childcare arrangements for your child(ren) under 12, would you like a job?'; or
- (e) were employees who had a job but had been away from work without pay for four weeks or more.

Own account workers (previously "self-employed")

Proportion of employed persons

Proportion of labour force

Quantum of extra hours on offer

Second job

Employed persons aged 15 and over who worked in their own business (without employees), did not pay themselves a wage or salary and the business was not a limited liability company.

The number of multiple jobholders in each group as a proportion of employed persons in the same group.

The number of multiple jobholders in each group as a proportion of the civilian labour force in the same group.

The sum of the preferred number of extra hours reported. It measures the number of potential hours of work lost due to insufficient volume of work.

A job other than the main job. Service in the reserve defence forces is not regarded as a second job. Persons who by the nature of their employment worked for more than one employer, e.g. domestics, odd-job workers, baby-sitters, etc., are not counted as having a second job unless they also held another job of a different kind, nor are those who worked for more than one employer solely by reasons of changing jobs during the reference week.

#### STANDARD DATA SERVICE

#### MULTIPLE JOBHOLDING, AUSTRALIA, AUGUST 1994

#### Product No. 6216.0.40.001

The standard data service for statistics from the above survey comprises the following tables:

Table

Multi	ple	iobho	lders	_
-------	-----	-------	-------	---

- 1. Age, number of multiple jobholders, proportion of employed, proportion of labour force and sex, August 1981 to August 1994
- Number of persons employed in occupation of second job as a proportion of all persons employed in that occupation and sex, August 1994
- Number of persons employed in industry of second job as a proportion of all persons employed in that industry and sex, August 1994
- Selected characteristics, number of multiple jobholders, proportion of employed persons, proportion of labour force and sex
- 5. Selected characteristics, hours worked in second job, status in employment in main job and sex
- 6. Industry of main job, industry of second job and sex
- Industry of second job, status of employment in second job, sex and whether worked in a second job in the reference week
- 8. Status in employment in main job, status in employment in second job, sex and marital status

#### Multiple jobholders who were employees in both jobs -

- 9. Industry of main job, full-time and part-time employee in main job and sex
- 10. Age, marital status, sex and full-time and part-time status in main job

# Multiple jobholders who were employees in both jobs and who worked in a second job in the reference week —

11. Weekly earnings in main job, weekly earnings in second job and sex

#### All populations —

12. State or Territory of usual residence and sex

Data items and how to order special tables from this survey

This standard data service is available by subscription or on request at a cost of \$17.50.

To place your order phone 1 800 032 156 or write to:

Subscription Services, Australian Bureau of Statistics, GPO Box 2796Y, MELBOURNE VIC 3001

For further information about the Standard Data Service and the availability of related special data services, contact Mr Michael Jones on Canberra (06) 252 6503.

#### STANDARD DATA SERVICE

### PERSONS NOT IN THE LABOUR FORCE, AUSTRALIA

#### **SEPTEMBER 1994**

#### Product No. 6220.0.40.001

The standard data service for statistics from the above survey comprises the following tables:

Table

1	Civilian population aged 15 to 69, September 1990 to September 1994 — Labour force status and sex
	Persons not in the labour force —
2 3	Selected characteristics
3	Main activity when not in the labour force, age and sex
	Persons not in the labour force, with marginal attachment to the labour force
4	Main reason for not actively looking for work and sex, September 1990 to September 1994
4 5	Main reason for not actively looking for work, intention to enter the labour force in the next twelve months, whether would prefer full-time or part-time work and sex
6	All reasons for not actively looking for work, intention to enter the labour force in the next twelve months, whether would prefer full-time or part-time work and sex
	Discouraged jobseekers —
7	Selected characteristics, September 1990 to September 1994
8	Selected characteristics and intention to enter the labour force in the next twelve months
9	Persons not in the labour force for childcare reasons who wanted to work — Age, age of youngest child, relationship in household, birthplace and sex
10	Persons not in the labour force who previously had a job —  Reason for ceasing last job, occupation in last job, status in employment in last job, full-time or part-time worker in last job and sex
11	Populations — State or Territory of usual residence and sex
